

Dyatmika School Charter

The Dyatmika Foundation was established for the purpose of building a non-profit school that would meet the needs of children in Bali and prepare them to be conscientious adults in tomorrow's world.

The guiding principles of the Dyatmika School comprise what the foundation believes to be basic pillars of a prosperous and responsible society:

- moral integrity
- religious and social tolerance
- intellectual capacity
- broad knowledge
- civic responsibility
- cultural preservation
- sensible management of the natural environment

These principles, directly and indirectly, are fundamental to the educational vision of Dyatmika.

Dyatmika strives to implement a broad, up-to-date and rigorous curriculum that teaches children the indispensable skill of how to learn. Students develop their critical thinking and creative skills in an atmosphere that respects their natural abilities and personal interests, while encouraging them to reach beyond their own perceived boundaries.

The school recognizes how the values and unique social and cultural traditions of Bali have served to create a stable and tolerant society. The observation of these values at school, as well as specific instruction in the native language, music, art and customs of Bali are a cornerstone of Dyatmika's commitment to cultural preservation. As the increasing cultural diversity of families in Bali is reflected in the student body, the atmosphere of Dyatmika is one of respect and celebration, and the teachers aim to draw enrichment from the variety of races and religions represented at the school.

Through a comprehensive programme of community service, Dyatmika is committed to developing in each student the capacity for compassionate response and exemplary citizenship. Students and graduates possessing a lasting commitment to public service are one measure of Dyatmika's success as an educational institution.

Furthermore, Dyatmika strives to instill in all its students an innate and profound sense of responsibility toward the natural environment and its inhabitants, both through curriculum enrichment and through field work on the school's premises as well as outside the school.

In the interest of fostering global understanding among peoples and in providing the students with essential communication skills, Dyatmika requires and provides for a high level of proficiency in the Indonesian and English languages, with the hope that further language acquisition will be sought and more easily attained by its graduates.

The school believes in the importance of teaching as a profession and is committed to the welfare and intellectual development of its teachers. The school provides ongoing in-house teacher training, opportunities to attend outside seminars as well as invites professionals into the school for training and exchange programmes.

Limited in size, Dyatmika is committed to outreach by establishing itself as a teacher training and resource center for educators outside the school, and to serving as a role model to schools island and nationwide.
